

On-Premise OCR.space Server v2019

OCR.space Local is powerful server-based OCR software for automated document capture and PDF conversion. Designed for low to high-volume batch processing, it enables organizations and scanning service providers to convert paper scans, PNG, TIFF, JPEG, and PDF image documents into electronic files suitable for full-text search and long-term digital archiving.

Features

Technically, the local OCR.space Server is **identical to our popular online OCR API service** (Engine1). The on-premise installation has the same features, same API parameters and same OCR quality as the OCR.space PRO PDF plan, **but runs 100% local** and never contacts the Internet.

Supported OCR Languages: Arabic, Chinese OCR (Simplified and traditional characters), Bulgarian, Croatian, Czech, Danish, Dutch, English, Finnish, French, German, Greek, Hungarian, Italian, Japanese, Korean, Norwegian, Polish, Portuguese, Russian, Spanish, Slovenian OCR, Swedish, and Turkish.

Installation Service at no extra cost: The Local server plans all include a custom installation service, which means our tech support install the OCR Service on your server via RDP at no extra cost. But if you prefer, you can install everything yourself. We provide a detailed installation guide.

Operating System: Windows 2016/2019 Server (any Edition), Windows 10 + IIS is also possible.

Minimum server hardware: 50 GB of free drive space, 4GB of memory, one CPU core (two recommended).

Virtualized Hardware: Supported. You can run the OCR server(s) on virtualized or cloud environments, such as Amazon AWS or Microsoft Azure.

OCR Server Local - Pricing

Our local installation plan requires only a **one-time payment** – it is *not* a subscription-based service. You purchase and own the software. The license fee is based on the number of CPU cores/servers:

OCR.space Local 1, One server/CPU license:	US\$ 2999.00
OCR.space Local 2, Two server/CPU license:	US\$ 3999.00
OCR.space Local 5, Five server/CPU license:	US\$ 4999.00
OCR.space Local 10, Ten server/CPU license:	US\$ 6999.00
OCR.space Local 25, 25-server/CPU license:	US\$ 9999.00

The license fee includes free upgrades and tech support for a year (called "Upgrade Assurance"). You can purchase additional years of free upgrades and tech support for 25% of the license fee at any time, or pay only 20% per year if you add additional years at the time of your initial purchase.

Example: For OCR.space Local 1, a second year of Upgrade Assurance is only US\$ 399/year if purchased with your initial order or US\$ 499/year if purchased separately during the year. You can purchase up to five years at once.

The **number of conversions is unlimited** (limited only by the hardware).

As a rule of thumb, you can process at least one million pages per month per CPU core on average server hardware. This means you pay less than 0.00025 US\$ per conversion in the first year, and less than 0.0005 US\$ in the following years. Adding support for more CPU cores improves the capacity and responsiveness further.

Our server/CPU license is flexible and can be used on one or more servers, depending on your business needs. For example, the two server/CPU license can be used on one server to utilize two CPU cores for processing or can be used to install the OCR server on two different machines and use one CPU core on each.
